

## Danish Industrial Classification and Standard Industrial Groupings

Danish Industrial Classification (DB) is a 6-digit classification of industries describing the economic activity. It was primarily prepared for statistical purposes. Danish Industrial Classification is directly based on the EU classification of industries NACE, and NACE is a sub-grouping of UN's industrial classification ISIC. The first two digits in Danish Industrial classification correspond to ISIC, while the first four digits correspond to NACE. Subsequently, there is a direct relationship between DB and international classifications, where DB contains a further sub-grouping of the industries that are relevant to analyse in greater detail in relation to the Danish industrial structure.

On 1 January 2008 Danish Industrial Classification 2007 (DB07) and new standard groupings came into force. From 1 January 2008 all enterprises are registered with a DB07 industry code. DB07 comprises 726 industry codes, thus the number of 6-digit industries is reduced, compared to the 825 industry codes used in DB03. Further information about DB07 is available at [www.dst.dk/downloadDB](http://www.dst.dk/downloadDB).

Below, four standard groupings are shown with 10, 19, 36 and 127 groups, respectively. These groups form the basis of using DB07 in statistics published by Statistics Denmark. The four standard groupings reflect an increasing aggregation of detail in the classifications. The code structure is linked to the codes in DB07 and indicates where you are in DB07. The 10-digit grouping uses 1-digit serial numbers, whereas the 19-grouping comprises one letter. The 36-grouping comprises one to two letters and the 127-grouping uses five digits. The relationship between the standard groupings and the 6-digit industry codes can be found on Statistics Denmark's website at: [www.dst.dk/downloadDB](http://www.dst.dk/downloadDB). The standard industrial groupings of DB03 are available at [www.dst.dk/db03-en](http://www.dst.dk/db03-en).
